

Create a html form with a submit button named 'change' and a paragraph about the college. write Javascript code modify the style of the paragraph text as specified below.

-html-form with a submit button named "change" and a paragraph about the college. The Javascript code modified the style of the paragraph text as specified.

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<title> modify paragraph style </title>
```

```
<style>
```

```
# college intro {
```

```
-font-family: Arial, sans-
```

```
-font-size: 16px;
```

```
color: black;
```

```
}
```

```
# college intro h1 {
```

```
background-color: yellow;
```

```
}
```

```
</style>
```

```
...
```

```
<form id="style-form">
```

```
<input type="submit" value="change" id="change-button">
```

2. create document-form changes element and append it to the document using java script to the browser. when user click on the button then the style element created.

-To create an element and append it to the browser when user click on a button using java script

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<title> Append image element </title>
```

```
</head>
```

```
<body>
```

```
<button id="create-image-button" value="create-image-button">create image </button>
```

```
</body>
```

```
document.getElementById("create-image-button").click()
```

```
var imgElement = document.createElement("img");
```

```
imgElement.src = "image.png";
```

ing element - src = 'https://www.placeholdr.com/150x150/';

document.body.appendChild(imgElement);

});

</script>

</body>

</html>
